Small Power Plant Project, Thaioil Public Company Limited

**Project Location**

[Map Image]

- Project Site

**Objectives and Project Information**

**Objectives**
- To sell the main portion of electricity generated to Electricity Generating Authority of Thailand (EGAT)
- To support an increasing demand for electricity in Thaioil Group

**Project Information**
- The small power plant is a co-generation plant with a maximum installed capacity of 246.4 MW using natural gas as fuel source
- The project is divided into 2 blocks
  - Block 1 with the maximum installed capacity of 128.3 MW
  - Block 2 with the maximum installed capacity of 118.1 MW

**Project Schedule**
- The project is expected to finish construction and start operation within 2016

**Environmental Mitigation Measures**

**Construction Phase**
- Spraying water in the construction area to reduce the amount of particulate matter generated
- Having a cover sheet over trucks to prevent the fall-out of materials or equipment during transportation
- Limiting and controlling the speed of trucks entering construction area
- Establishing safety rules and/or procedures for contractors, and enforcing contractors to be strictly responsible for those rules and/or procedures
- Providing preventive maintenance for machines and equipment, and training contractors on how to operate them

**Operation Phase**
- Controlling emission from the stacks, and installing the Continuous Emission Monitoring System (CEMs)
- Revising fire protection and fire fighting plan and evacuation plan of Thaioil refinery to include the project area
- Conducting emergency response exercise regularly
- Providing preventive maintenance for fire extinguishers and alarm systems regularly
